It's the foundation for understanding how to use your dslr camera. Every camera (even your camera phone) utilizes three elements - Shutter Speed, Aperture, and ISO - and balances them to create an "exposure," or image. Exposure refers to how much light reaches your camera's sensor when you take a photo.

Easy to Understand DSLR Photography for Beginners PDF

A DSLR camera (Digital Single Lens Relax) is always the first camera I recommend as it is so versatile and great as an entry level camera for astrophotography for beginners. Their easy to get started, have a vast range of lenses and add a tripod and you're ready to start shooting. The Canon series have been a staple in my astro imaging.
