Learning Objectives, Critical Concepts and Study References

We differentiate 2 etiologic lines of amblyopia: 1st stimulus deprivation, 2nd suppression (von Noorden). The majority of our patients suffer from a combination of both: moderate stimulus deprivation (ametropia or anisometropia) with strabism. It is easy to agree with the general definition and classification of amblyopia.

Amblyopia: Clinical Aspects | SpringerLink

Amblyopia is a common developmental visual disorder that is diagnosed by reduced visual acuity in one, or occasionally both, eyes—despite full optical correction and no evident ocular pathology. 1 It affects approximately 2% to 4% of the population 2 and remains the most common form of monocular vision loss in children, 3 accounting for most children's eye appointments in the United Kingdom ...

The Pattern of Learned Visual Improvements in Adult Amblyopia

A question of increasing interest to the basic science and clinical management communities during the past decade is whether children and adults with amblyopia and associated binocular visual abnormalities experience difficulties in executing real-world actions, to which vision normally makes an important functional contribution.
