Antenna plays a vital role in all these devices. A good antenna design can result in a high degree of efficiency, better directivity and more beamwidth for long-distance transmission without much loss of information. Here is a program written in MATLAB for designing antenna arrays & antenna analysis.

In the case of an omni directional antenna like a dipole, azimuthal integration reduces to a multiplication by  $2\pi$ . This fact was utilized to eliminate loops within the MatLab code. Once the total power radiated ( $P_{rad}$ ) is known, the Directivity of the antenna can be calculated using equation 2-16 on page 39 of Balanis.

Prof Balanis is a master in Antenna Theory. I have read previous editions and was delighted with this book. The book is not for novices. A mastery of Maxwells equations is necessary to appreciate this book, fully. The Author develops the subject from fundamentals. Each chapter is very well organized and can be read, independently.
