National Audubon Society Guide to Marine Mammals of the World

Marine mammals are aquatic mammals that rely on the ocean and other marine ecosystems for their existence. They include animals such as seals, whales, manatees, sea otters and polar bears. They are an informal group, unified only by their reliance on marine environments for feeding and survival.

Marine mammal - Wikipedia

Marine mammals comprise over 130 living and recently extinct species in three taxonomic orders. The Society for Marine Mammalogy, an international scientific society, maintains a list of valid species and subspecies, most recently updated in October 2015. This list follows the Society's taxonomy regarding and subspecies. Conservation status codes listed follow the IUCN Red List of Threatened Species and are clickable to link to IUCN Red List species pages. EX - extinct EW - extinct in the wild C

Biology of marine mammals (Book, 1999) [WorldCat.org]

Knowledge of mammalian diversity is still surprisingly disparate, both regionally and taxonomically. Here, we present a comprehensive assessment of the conservation status and distribution of the world's mammals. Data, compiled by 1700+ experts, cover all 5487 species, including marine mammals. Global macroecological patterns are very different for land and marine species but suggest common ...

The Status of the World's Land and Marine Mammals ...

At 100 feet long and 200 tons, not only is the blue whale the biggest mammal in the world, but it's also the largest vertebrate animal that has ever lived. Not even the largest dinosaurs approached it in bulk. Some titanosaurs were over 100 feet long, but they didn't weigh 200 tons. Fittingly, the blue whale is also the loudest animal on earth.

The 20 Biggest Mammals, Ranked by Category

Marine mammals include some of the most fascinating animals on Earth. Large, majestic whales and stunning, playful dolphins have provided mysterious companionship to humans at sea for hundreds of years.
