States of Matter

- All matter can undergo physical and chemical changes
- Physical change – occurs when a substance alters its state (phase change), but does not change its chemical composition – E.g. Grinding, cutting
- Phase change – transition of a substance from one state to another – Depend on temperature and pressure

OF MATTER

Matter undergoes phase changes or phase transitions from one state of matter to another. Below is a complete list of the names of these phase changes. The most commonly known phase changes are those six between solids, liquids, and gasses. However, plasma also is a state of matter, so a complete list requires all eight total phase changes.
