Recently, I obtained an almost cosmetically perfect Sankyo Super 8 Sound-501 projector. It came complete with all the original packaging and accessories, even the original box, all in excellent condition. The projector also came with a 2-pin plug instead of the usual. I got hold of a standard kettle lead and it all works perfectly in 18fps.

I have seen several questions about the motor failing on the Sankyo sound 600 movie projector. Here is the most probable fix: The problem is most likely a failing pot and transistor on the little circuit board located in the upper right area of the back of the projector. This is a relatively easy fix.
