Silviculture, Forest Management and Extension

Silviculture is an extension of the forestry discipline focused on sustainably managing the structure and growth processes of forested areas via science-based methods. Silviculture works to control tree and vegetation density, replenish unproductive areas with new trees, monitor forest ecosystems, protect existing trees from invasive insects, diseases, and other destructive agents, and harvests trees when needed.

Silviculture Handbook, 2431.5 | Wisconsin DNR

Silvicultural Systems. Silviculture is the cultivation and care of forest trees and is the heart of the field of forestry. A silvicultural system is a series of planned treatments for tending, harvesting, and reestablishing groups of trees similar in age, composition, and structure (called a stand). The system is chosen for the life of the stand and is a decision that is made long before cutting any trees.
