Thermal engineering is any activity building or maintaining equipment that has heat flow as a significant concern in its design. Which is just about anything ever built. So anything from sizing an air -conditioner for a house, to design a radiation shield for a fusion reactor, to a solar panel, to a steam engine to a convective cooling tower.

What is thermal engineering and what is it used for? - Quora

Thermal engineering is a specialized discipline of mechanical engineering that deals with the movement of heat energy and transfer. Since the energy can be transformed between two mediums or transferred into other forms of energy, a thermal engineer must have knowledge of thermodynamics and the process to convert generated energy from thermal sources into chemical, mechanical, or electrical energy.
