produced in the nucleus of a cell moves out of the nucleus to the cell's ribosomes.

This RNA is a specific sequence of bases copied from the DNA which carries the chromosomal genetic message to the cytoplasm. Thus, it is called messenger (mRNA). At the ribosomes, mRNA directs the building of proteins.

### **Date Period Purpose**

c) Remember, the ribosome can only handle two tRNA strands at a time. So, click the Dehydrate button to activate the process of dehydration synthesis, or the loss of water molecules during protein building. d) Continue to build the protein by joining amino acids to the chain in the correct order. Every amino acid

Transfer RNA, or tRNA, is a member of a nucleic acid family called ribonucleic acids. RNA molecules are comprised of nucleotides, which are small building blocks for both RNA and DNA.
